

The impressive growth in Certified Community Behavioral Health Clinics (CCBHCs) highlights the need for Behavioral Health and Human Services EHRs like SmartCare™ that can effectively integrate a variety of providers and services, capture and report on key metrics, and enable providing services remotely.

Key Benefits

Manage person-centered behavioral and physical health treatment planning and coordinate care with a range of organizations in the community, including local primary care and hospital partners.

Deliver integrated, coordinated care based on evidence-based practices and report on quality metrics.

Generate, track, manage, and analyze billing and financial information seamlessly across a variety of reimbursement methods and service and program types.

Accept direct data entry by Designated Collaborating Organization's (DCO) and send and receive CCD data sets with other community providers.

Seamlessly provide services in homes, schools, jails, homeless shelters, and other locations outside of the clinic.

Key Functions

As an enterprise-grade, single platform, SmartCare™ is ideal for CCBHCs. It enables Behavioral Health and Human Services organizations to deliver person-centered care via a unified platform that provides true integration of all inpatient, outpatient, and community-based services. It provides a high degree of interoperability, including the ability for direct data entry by DCO's and to send and receive continuity of care documents (CCD) data sets with other community providers via direct messaging interfacing.

Key Functions

SmartCare™ provides intelligent workflows that capture the CCBHC-required clinical measures for reporting as well as state-level measures. It offers the capability to assess, stratify and define quality metrics. SmartCare's flexibility allows organizations to designate a population subset as CCBHC or include all components of their business as a CCBHC. All of these functions are built into the core platform.

SmartCare™ enables organizations to seamlessly provide services in homes, schools, jails, homeless shelters, and other locations outside of the clinic and to provide crisis services 24-7. SmartCare™ Anywhere further enhances access to care with remote functionality built into the platform to allow clinicians and other staff to access client records and work via mobile devices in an offline environment with limited or no access to the Internet.

SmartCare's Revenue Cycle Management provides billing flexibility that meets state-specific reimbursement requirements for CCBHCs, including fee-for-service, case rate, or other payment models.
