SmartCare™ | BEHAVIORAL HEALTH EHR
by Streamline Healthcare

SmartCare™ is a single, Enterprise platform that can seamlessly integrate primary care functionality for complete treatment of a client's mental and physical health, enabling true whole person care.

Key Benefits

Robust functionality includes scheduling, referral tracking, flow sheets, order entry and management, progress notes, problem tracking, and health maintenance templates.

Physician Dashboard where physicians have easy access to key information in one place.

Integrated medication management and ePrescribing via SmartCare Rx™.

Seamless integration of physical and behavioral health in one application with permissions-based sharing of data.

Key Functions

SmartCare™ Primary Care is seamlessly integrated with both Practice Management and Medication Management.

Primary Care includes a Physician Dashboard where physicians have easy access to key information, including orders, appointments, lab orders, batch signatures for approval, alerts and messages, etc. Streamline utilizes the corresponding Value Set Authority Center (VSAC) coding sets such as SNOMEDCT, LOINC, RXNORM, and ICD-10-CM.

Primary Care's robust functionality includes scheduling, referral tracking, flow sheets, order entry and management, progress notes, problem tracking, and health maintenance templates.

With SmartCare Rx™, Primary Care also offers integrated ePrescribing functionality, including sending prescriptions to any pharmacy on the Surescripts network and access to information such as order history and known allergies.

SmartCare™ Primary Care seamlessly integrates physical and behavioral health with permissions-based sharing of data, including medications and shared flow sheets.
